

## Seal pipe penetration and waterproof liner

**WA-GPF seals - are dual purpose seals that seal pipe and liner at the same time.**

WA-GPF liner seals have a fixed and a loose collar flange, both the pipe penetration and waterproof wall liners are sealed around the pipe.

The loose flange clamps and seals the liner and the compression disc seal waterproofs the pipe penetration through the wall.

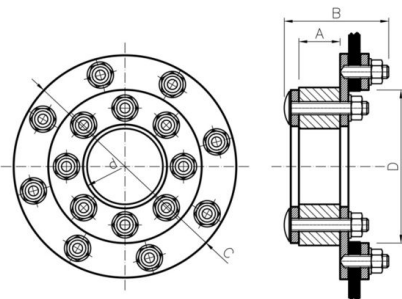

Multiple pipes through the same opening may also be sealed using a WA-GPF.

The WA-GPF seal element may be EDPM, NBR or Silicone, the compression plates are stainless steel, 304L or 316L. Sealing up to 36 psi or greater is accomplished.

The seal allows for multi pipe/conduit through the same opening.

Watertight - Gas tight.

**Fit all American and International pipe sizes**
