

## Link Seals Leaking - Repair solutions

**Link seal pipe leaking problems** can be fixed using a WA-GP-T repair assembly. Leak repairs are made while the pipe remains in service.

Westatlantic Tech Corp., is a leading supplier of pipe sealing systems, dedicated to sealing foundation and masonry wall pipe penetrations.

A WA-GP-T external wall mount assembly, is a compression seal system for watertight solutions up to 72 psi.

Re-sealing may be accomplished without excavating around the foundation wall or manhole.

Sealing may take place on the inside wall or the outside wall. If the inside manhole wall or inside foundation wall space is not available, the seal can mount on the outside wall.

Sealing pipes through concrete structures below grade requires well planned solutions and the selection of products that best fits the application.

All material for a to ready install assembly is shipped with the product.

**Inquire at Westatlantic** or tel: 902 455 4455 the solution experts on through wall pipe penetrations.
