

Pipe Support Rollers - Pipe Support Casing Spacers - Roller Cradles for Axial pipe Movement

SLIDING PIPE SUPPORT ROLLERS FOR AXIAL FORCE MOVEMENT

Materials:

Diameter range: DN 100 - DN 3000 / 4 inch - 120 inch
Material: Stainless steel 1.4307 / 304L, Galvanized steel

Pipeline support Slide - Rollers are widely used in various industries, where high axial forces are present.

Slide rollers are used especially where ambient or internal temperature changes are present. The system may be used in LNG, LPG, OIL and water pipelines.

Supports consists of a bracket and cradle form with rollers fixed to the containment structure.

Where pipelines are affected by axial and lateral forces, directional roller elements can be replaced with Omni directional rollers.

Slide pipe support solutions are available for most pipe movement applications.
